

Rio Lomming (superiore)

Description:

The canyon is located in the Val Resia above the village Stolvizza. The canyon was already explored in 2009, but only the lower two-thirds of the canyon. But the upper part had to wait to 2014. Rio Lomming superiore is a very steep canyon with very clean water. The superiore part is ending near weater supply where it is possible to enter inferiore part or go out. We recommended the descent over the entire canyon. More informations about inferiore part are on web page www.AIC forum.it.

Zone:

Friuli – Udine – Val Resia

Qualities:

Entrance: 920

Exit: 790 m

Height: 130 m

Length: 180m

Yes, after the first bolted waterfall.

Maps:

Carta Tabacco Canin-Val Resia 027

Attraction:

Local

Difficulty:

V3 a2 III

Access:

From main road Udine-Tarvisio in village Resiutta turn on local road to Val Resia and continue towards Stolvizza. Park your car on large parking place as soon as you come into the village.

Approach:

On the car park you found signs Bellvedere and you follow them uphill to the end of the asphalt road where is a small park with little wooden houses and benches. Afterwards turn left and follow signs to Pusti Gozd. The path leads to a small concrete buildings , on which are painted 3 blue arrows. If you turn left you reach the entrance to the inferiore part in 2 minutes. If you continue on the main path you reach the wooden bridge in 15 mintes. That is the entrance to the superiore part of the canyon..

Description of the canyon:

The first uninteresting cascade bypass on the right side.

T 3m
